

## REACH Compliance Statement

April 29, 2025

Celsia Inc. hereby certifies that all custom heat sinks and associated components manufactured, designed, or supplied by our company are compliant with the European Union Regulation (EC) No 1907/2006 concerning the Registration, Evaluation, Authorization, and Restriction of Chemicals (REACH), including the latest amendments and the updated Candidate List of Substances of Very High Concern (SVHCs) published by the European Chemicals Agency (ECHA).

Under REACH, manufacturers and importers are required to identify and manage the risks linked to the substances they manufacture and market in the European Union.

- Celsia products, including custom heat sinks and related assemblies, do not contain SVHCs in concentrations greater than 0.1% by weight in any homogeneous material, based on the latest Candidate List as of the date of this statement.
- Where SVHCs are present above the threshold, Celsia fully complies with the required communication and disclosure obligations under Article 33 of the REACH Regulation.
- Celsia's manufacturing operations do not involve the intentional use of restricted substances listed under Annex XVII of REACH.

Celsia ensures REACH compliance by:

- Collecting and maintaining Declarations of Conformity and Material Declarations from all material and component suppliers.
- Conducting regular reviews against the latest SVHC updates published by ECHA.
- Performing risk assessments and material testing where necessary.
- Implementing supplier management and quality control procedures to monitor chemical compliance.

This declaration is based on the latest information available from our suppliers and industry standards, supported by Celsia's internal compliance management practices.
